

# Indexed universal life insurance index performance history

For Builder Plus IUL® 4 issued by North American Company for Life and Health Insurance®

## Index performance history

The charts below provide historical performance of various indices and crediting methods available in the Builder Plus IUL 4 indexed universal life (IUL) insurance product. You may choose to allocate premium into any one or a combination of index selections. An index selection is a combination of an index (Example: Fidelity Multifactor Yield Index<sup>SM</sup> 5% ER) and an index crediting method (Example: annual point-to-point). This provides you the opportunity to earn tax deferred interest on the interest credits linked to the performance of one or more stock market indices.<sup>1</sup> This feature gives you the potential for strong cash value accumulation in an IUL insurance policy.

The interest rate credited to the policy's index account value is linked to the performance of the index or indices chosen and will never be less than the floor. The interest credited is also subject to an index cap, participation rate, and/or spread depending on the index you select. The interest credited cannot exceed the cap rate.

The following charts show actual stock market activity. There are also accompanying charts which show what the IUL performance would have been, had North American's current index cap, participation, spread, and floor rates been applied.

## Annual point-to-point:

With the annual point-to-point strategy, we measure the movement of the index from the beginning to the end of the 12-month index period, with the exception of the first policy year which has an 11-month index period. This value is then multiplied by the index participation rate. The resulting interest crediting rate can never be less than the index floor rate and can never be more than the annual index cap rate.

# Indexed universal life insurance index performance history

For Protection Builder IUL® issued by North American Company for Life and Health Insurance®

## Index performance history

The charts below provide historical performance of various indices and crediting methods available in the Protection Builder IUL indexed universal life (IUL) insurance product. You may choose to allocate premium into any one or a combination of index selections. An index selection is a combination of an index (Example: NASDAQ-100®) and an index crediting method (Example: annual point-to-point). This provides you the opportunity to earn tax deferred interest on the interest credits linked to the performance of one or more stock market indices.<sup>1</sup> This feature gives you the potential for strong cash value accumulation in an IUL insurance policy.

The interest rate credited to the policy's index account value is linked to the performance of the index or indices chosen and will never be less than the floor. The interest credited is also subject to an index cap, participation rate, and/or spread depending on the index you select. The interest credited cannot exceed the cap rate.

The following charts show actual stock market activity. There are also accompanying charts which show what the IUL performance would have been, had North American's current index cap, participation, spread, and floor rates been applied.

## Annual point-to-point:

With the annual point-to-point strategy, we measure the movement of the index from the beginning to the end of the 12-month index period. This value is then multiplied by the index participation rate. The resulting interest crediting rate can never be less than the index floor rate and can never be more than the annual index cap rate.

### Glossary

**Index** – Measure of stock market performance; does NOT include dividends on the underlying stocks.

**Index crediting method** – How to measure the index movement over the index period.

**Index period** – The length of time over which the index is measured.

**Index selection** – Combining an index with an index crediting method creates the index selection.

**Participation rate** – The percentage of the index movement that is credited to the index account (subject to any index cap).

**Index cap** – Maximum interest rate that is credited to the index account.

**Floor** – Minimum annual interest rate that is credited to the index account.

**Spread rate** – The rate that is subtracted from the index growth.

## Historical monthly point-to-point:

With the monthly point-to-point strategy, we measure the change in the index each month over the 12-month index period. The monthly percentage change can be positive or negative and is subject to a monthly index cap rate. At the end of the index period, those values are added together to find the interest crediting rate. The interest crediting rate can never be less than the annual index floor rate. Monthly point-to-point is available with the S&P 500® only.

# Indexed universal life insurance index performance history

For Smart Builder® IUL 3 issued by North American Company for Life and Health Insurance®

## Index performance history

The charts below provide historical performance of various indices and crediting methods available in the Smart Builder IUL 3 indexed universal life (IUL) insurance product. You may choose to allocate premium into any one or a combination of index selections. An index selection is a combination of an index (Example: S&P 500®) and an index crediting method (Example: annual point-to-point). This provides you the opportunity to earn tax deferred interest on the interest credits linked to the performance of one or more stock market indices.<sup>1</sup> This feature gives you the potential for strong cash value accumulation in an IUL insurance policy.

The interest rate credited to the policy's index account value is linked to the performance of the index or indices chosen and will never be less than the floor. The interest credited is also subject to an index cap, participation rate, and/or spread depending on the index you select. The interest credited cannot exceed the cap rate.

The following charts show actual stock market activity. There are also accompanying charts which show what the IUL performance would have been, had North American's current index cap, participation, spread, and floor rates been applied.

### Annual point-to-point:

With the annual point-to-point strategy, we measure the movement of the index from the beginning to the end of the 12-month index period, with the exception of the first policy year which has an 11-month index period. This value is then multiplied by the index participation rate. The resulting interest crediting rate can never be less than the index floor rate and can never be more than the annual index cap rate.

### Glossary

**Index** – Measure of stock market performance; does NOT include dividends on the underlying stocks.

**Index crediting method** – How to measure the index movement over the index period.

**Index period** – The length of time over which the index is measured.

**Index selection** – Combining an index with an index crediting method creates the index selection.

**Participation rate** – The percentage of the index movement that is credited to the index account (subject to any index cap).

**Index cap** – Maximum interest rate that is credited to the index account.

**Floor** – Minimum annual interest rate that is credited to the index account.

**Spread rate** – The rate that is subtracted from the index growth.

## Historical monthly point-to-point:

With the monthly point-to-point strategy, we measure the change in the index each month over the 12-month index period, with the exception of the first policy year which has an 11-month index period. The monthly percentage change can be positive or negative and is subject to a monthly index cap rate. At the end of the index period, those values are added together to find the interest crediting rate. The interest crediting rate can never be less than the annual index floor rate. Monthly point-to-point is available with the S&P 500® only.

## NOT FOR USE IN OREGON

1 The tax-deferred feature of the indexed universal life policy is not necessary for a tax-qualified plan. In such instances, you should consider whether other features, such as the death benefit and optional riders make the policy appropriate for your needs. Before purchasing this policy, you should obtain competent tax advice both as to the tax treatment of the policy and the suitability of the product.

Index Performance History is current as of 8-12-2024.

Indexed Universal Life insurance products are not an investment in the "market" or in the applicable index and are subject to all policy fees and charges normally associated with most universal life insurance. Historical performance of the indices is not intended to predict or project performance.

Life insurance policies have terms under which the policy may be continued in force or discontinued. Current cost of insurance rates and interest rates are not guaranteed. Therefore, the planned periodic premium may not be sufficient to carry the contract to maturity. The Index Accounts are subject to caps, participation and spread rates. In no case will the interest credited be less than 0 percent. Please refer to the customized illustration provided by your agent for additional detail. The policy's death benefit is paid upon the death of the insured. The policy does not continue to accumulate cash value and excess interest after the insured's death. For costs and complete details, call or write North American Company for Life and Health Insurance, One Sammons Plaza, Sioux Falls, SD 57193. Telephone 877-872-0757.

### S&P 500® Index

### S&P MidCap 400® Index

These Indices do not include dividends paid by the underlying companies.

The S&P MidCap 400®, and the S&P 500® ("the Indices") are products of S&P Dow Jones Indices LLC or its affiliates ("SPDJI") and have been licensed for use by North American Company for Life and Health Insurance® ("the Company").
